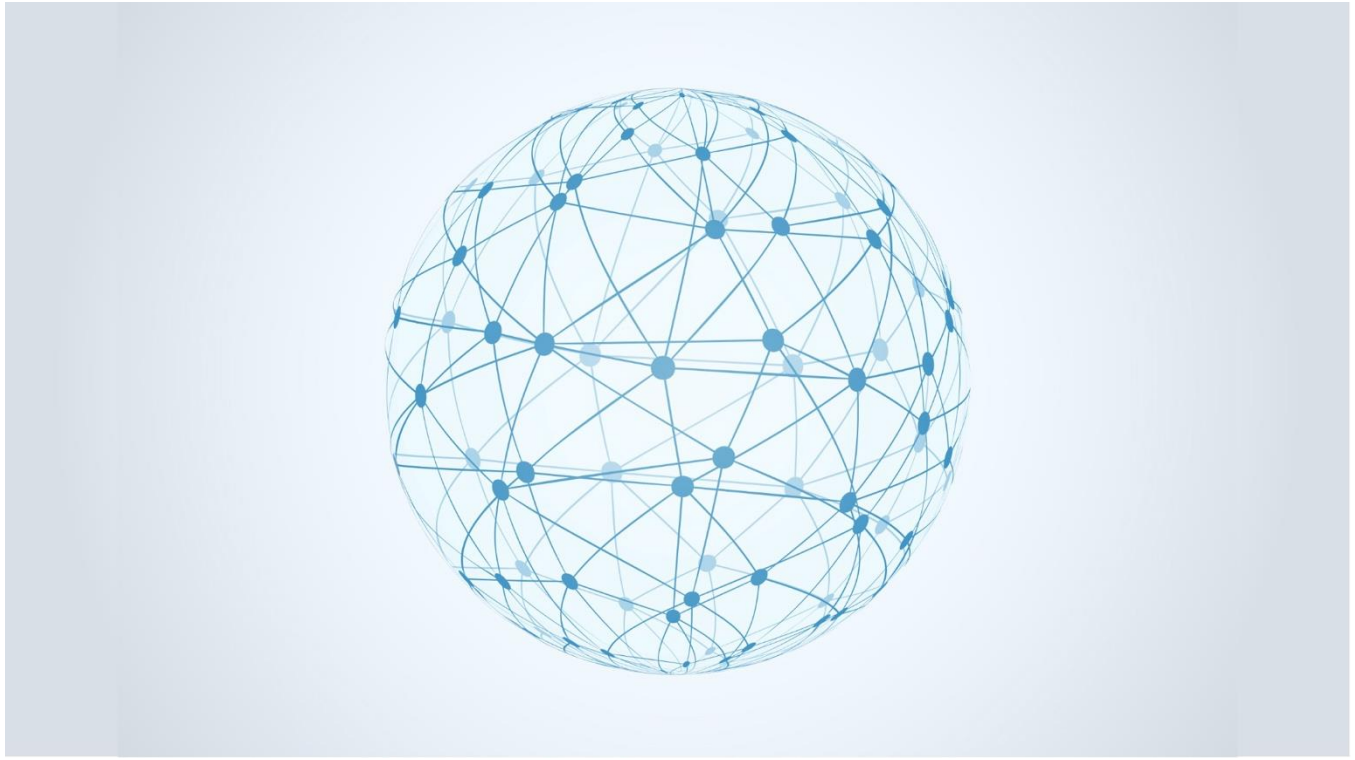
RDF and SPARQL Essentials

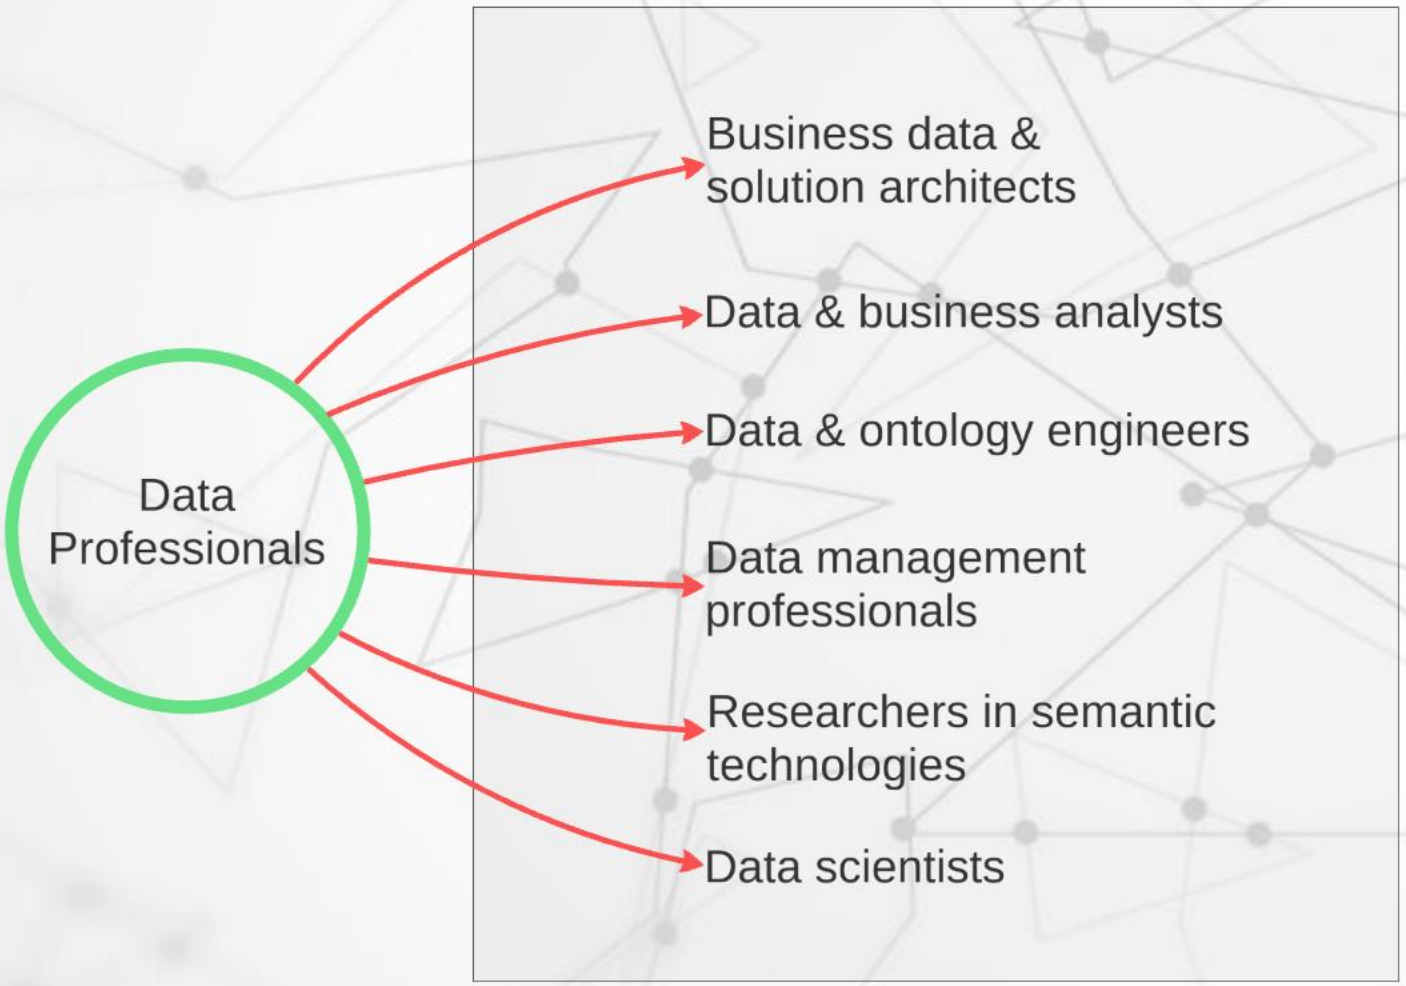


graftilo

01 Introduction

Audience

Without prior hands-on RDF & SPARQL exposure



Learning Objectives

SPARQL exposure

alysts

gineers

mantic

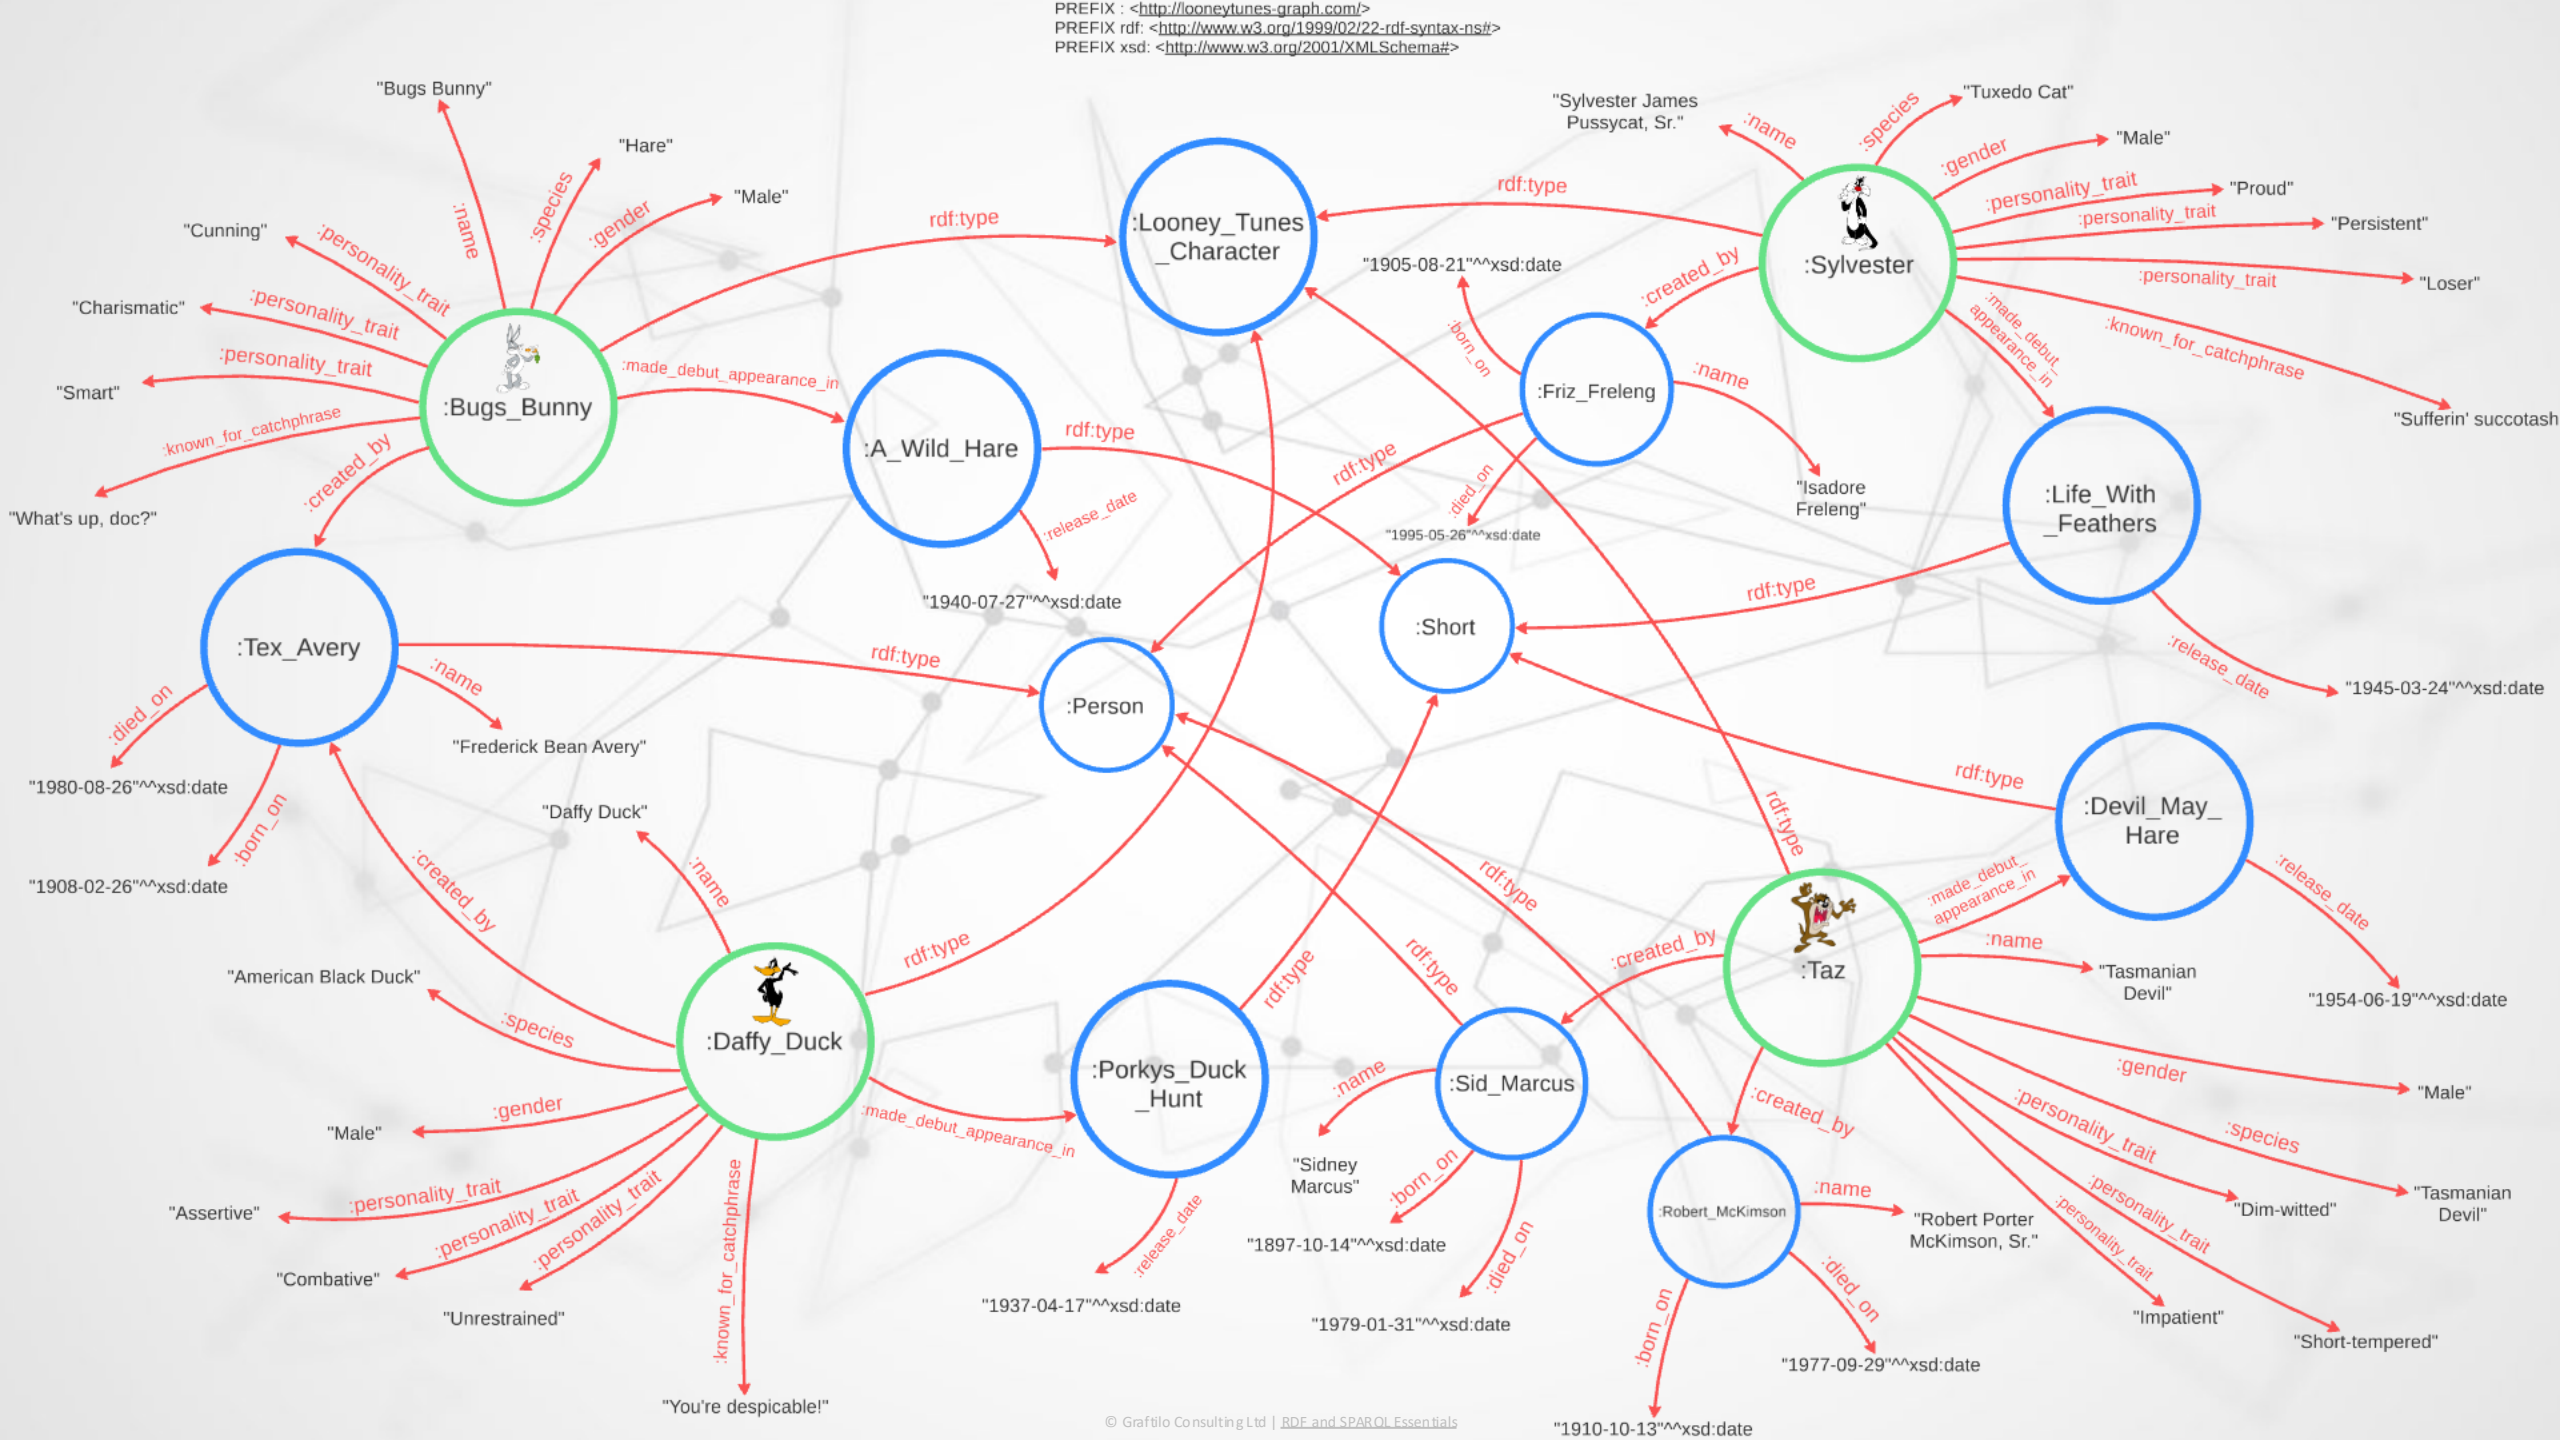
Develop a good understanding of modern semantic data technologies

Comfortably speak RDF & SPARQL

Compose RDF data & perform CRUD (create, read, update, delete) operations using SPARQL

Build a rock-solid foundation for more advanced training in semantic approaches

02 Building blocks of an RDF graph



:Bugs_Bunny

[Subject]

:made_debut_appearance_in

[Predicate]

[Object]

:A_Wild_Hare

"1940-07-27"^^

Triple

(a.k.a. statement)

RDF Nodes

There are three kinds of nodes in RDF: IRI, Literal and Blank Node

Internationalized Resource Identifier (IRI)

Literal

"Bugs Bunny"

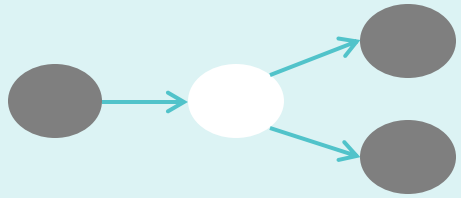
"1940-07-27"^^xsd:date

.

.

.

Blank Node



Optional. Avoid as much as possible

Literal

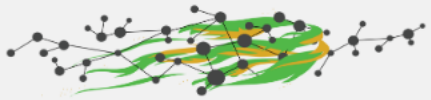
Datatype values

Serialization	Datatype
“Bugs Bunny”	xsd:string
“Bugs Bunny”^^xsd:string	xsd:string
“Bugs Bunny”@en	rdf:langstring
“1940-07-27”^^xsd:date	xsd:date
101	xsd:integer
2.0	xsd:decimal
True	xsd:boolean

03 Authoring RDF graph data

Blazegraph Workbench

localhost:9999/blazegraph/#update



blazegraph workbench

ultra-scalable, high-performance database from Blazegraph
